

Treatment developed with the exclusive ingredient VOLUPLUS®
Volumizes and firms the breast.

Aesthetic problems of the breast

Breasts are vital organs in women, not only for its elemental biological function, lactation, but because they constitute a female attribute. Therefore, the alterations are a major concern for most women. The good aspect of the breast is influenced by factors such as the position, strength, volume, adherence to thorax, skin and muscle tone. These concepts are determined largely by the lack of a truly effective support element, and by the many hormones that influence changes and anomalies that the breast suffers throughout life, and that will result in breast ptosis.

Modifications

- Decreased mammary gland
- Relaxation of the superficial musculature with muscle strain due to lack of fastening
- Relaxation of the skin wrapping after transient hypertrophy resulting from pregnancy, obesity or age
- Reduction of adipose tissue and connective
- Thinning and dehydration of the skin of the neckline

Consequences

- Fall of the breasts
- Sagging breasts
- Loss of turgor
- Changes in breast volume and firmness by altering the tissue
- Deep wrinkles on neck

Main synergy

VOLUPLUS®

The exclusive complex VOLUPLUS®, and as a result of the synergistic action of its main components, leads into an increase in breast volume. Its formula helps to strengthen the supporting fibers stimulating the synthesis of collagen, moisturising and softening the skin. Increases healing and tissue oxygenation and thanks to its antioxidant, fights free radicals, preventing lipid peroxidation of the membrane and the extracellular matrix strengthening.

1

It acts in adipose breast tissue, increases the formation of adipocytes and increases the size of the stored lipid vacuoles

2

Confers resistance to the dermis by strengthening the supporting fibers

3

It acts as a protector against oxidation

Symptoms

Anubis solution

1

PEROXIDATION

Oxidative stress causes a peroxidation of the lipids of cell membranes and a degradation of the extracellular matrix. Deficit in the structural integrity and brittle connective tissue.

HOPS HAMAMELIS

ANTIOXIDANT ACTION

Increases microcirculation improving cellular functions and oxygenating the tissue, apart from transport the rest of actives. Strong protective activity against cell damage, neutralizes free radicals.

2

REDUCTION OF THE SUBCUTANEOUS ADIPOSE TISSUE AND DEHYDRATION

The reduction of the mammary gland and adipose tissue of the breast, causes a vacuum effect and a distension of the connective tissue. The dehydration of the tissue increases this effect by decreasing the thickness of epidermis and by losing elasticity and turgor.

VOLUPLUS® HYALURONIC ACID

HYDRATION AND SKIN TURGOR

It acts on the fatty tissue of the breast increasing the size of the stored lipid vacuoles and increasing the formation of mature adipocytes. Its ability to absorb and retain water increases the turgor of the dermis and improves its appearance.

3

DISTENSION OF THE TISSUE

The increase or decrease of fat tissue will lead to a reduction of the elasticity and tone of the tissue. Due to not having adequate support, the mammary gland will cause a drop of the breast.

SOYBEAN SEED OIL HORSETAIL

PREVENTS AND TREATS LOSS OF ELASTICITY AND FIRMING OF THE TISSUES

Restructuring of damages and creation of structural links on the skin. Helps to restore fibroblasts, collagen and elastin fibers, promoting the turgidity and elasticity of the tissue. Toning and tightening effect.

Protocol of the line**Cosmetic indications**

- Loss of turgor, elasticity and firmness
- Preventive and restorative in slimming diets
- Post-partum and after lactation

**Duration and periodicity**

- Time per session: 1 hour/treatment
- Intensive treatment: 6 sessions minimum, twice a week
- Maintenance: 2 monthly sessions

**Use in equipment**

- The concentrate MODEL SEN can be applied by devices.

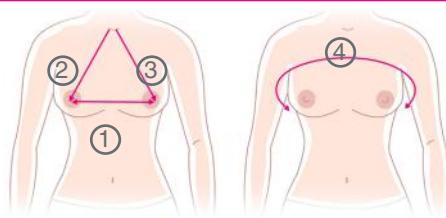

**Precautions**

- Not described.

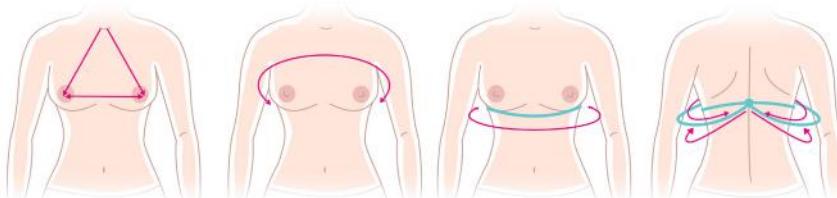

Protocol of the line ► Step by step**1 Measuring**

Before and after each treatment session, we recommend to take breast measurements in order to obtain more reliable results.

**2 How to adjust the band**

Before starting with the step 3, we adjust the band as it is indicated in the images.

**3 Cleansing and toning**

- In supine position, extend ZUL SENSITIVE CLEANSING MILK on the skin of the breast and work gently using a brossage brush with circular motions in order to stimulate the circulation. Remove with water.
- Apply SENSITIVE ZUL TONIFYING LOTION vaporizing the product. Work with gentle tapping with the fingertips until fully absorbed.

**4 Exfoliation**

- Mix two measures of ENZYMATIC PEELING with LOTION EAU VERT until obtaining a fluid mixture that allows its application with a brush. Spread it and leave it to take effect for 10 min.
- Remove with water and use SENSITIVE ZUL TONIFYING LOTION

**5 Concentrate and massage**

- Apply the concentrate MODEL SEN CONCENTRATE manually and work by digitals until completely absorbed.
- Apply MODEL CREAM SEN in the area to treat and work it until completely absorbed.

**6 Mask** Previously, apply a thin layer of MODEL SEN CREAM over the area where we will apply the mask.

It is essential to apply the gauze over the treatment area to facilitate later the removal of the mask. Make the necessary cuts to fit it perfectly (see diagram of cuts on top).

- In a bowl, mix 75ml. MODEL SEN MASK with 60ml. EAU VERT lotion. Stir until obtain a smooth mixture which allows implementation by hand.
- With the help of a glove, quickly apply on the gauze MODEL SEN MASK, shaping the breast and avoiding the area of the areola and nipple.
- Leave it to take effect from 15 to 20 minutes, and remove it one-piece upwards. Apply lotion on the area with cotton soaked in lotion EAU VERT to improve the removal of any remaining mask.

7 Finalisation Apply MODEL SEN CREAM until its complete absorption.

For more information about the products used in the protocol that are not part of the MODEL SEN line:

Main active ingredients

Soybean seed oil	An extract rich in amino acids that helps to smooth. Contributes to the healing of tissues, stimulates the synthesis of collagen and elastin and increases tissue oxygenation.
Shiitake Extract	It is known for being one of the most popular sources of protein in Japan. Contains eight essential amino acids as well as a mixture of vitamins and minerals (including vitamin A, B, C, D, potassium and zinc) and polysaccharides (especially known, lentinan). It contains the enzyme Superoxide Dismutase, which has a great antioxidant effect and fights the effects of free radicals. It also has soothing and decongestant properties of the skin
Horsetail Extract	Helps to maintain the amount of collagen and elastin fibers, which is useful for preserving the structural integrity and the development of connective tissue and delay of skin ageing. Helps to maintain skin elasticity, strengthens capillaries and improves blood circulation. It also contains tannins which have an astringent activity, restrict fluid loss and prevent external damage, thereby promoting tissue regeneration. Its remineralizing activity helps skin find its natural balance, restores vitality and improves its appearance and texture.
Hamamelis	With antioxidant properties, besides protecting the skin from oxidative stress, it can also achieve to reverse the problems of ageing skin. Thanks to its flavonoid content, hamamelis extract has an phlebotonic effect, strengthens capillaries and improves blood circulation.
Hops Extract	It has antioxidant properties, protects the skin from oxidative stress and may even reverse some ageing skin problems. It also contains flavonoids and resins that give anti-irritant properties.

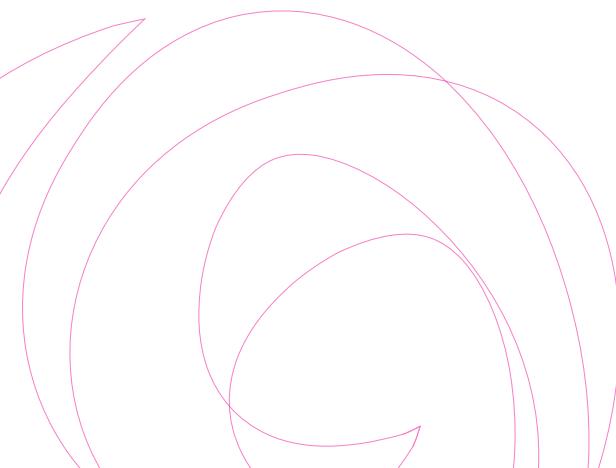

Specifications PARABEN FREE / MINERAL OILS FREE

Skin type**Results**

For all skin types, especially in cases where an increase in volume and firmness it is desired. Also after periods of pregnancy, lactation and during periods of diet, to restore the original shape of the breast.

Actively combats sagging bust giving it firmness. Shapes the breast, giving it volume and shape, firming support tissues and providing elasticity and smoothness to the tissue.

How to use	Equipment	Frequency of use	Precautions
<ul style="list-style-type: none"> Professional use: In MODEL SEN treatment, apply it with massage according to professional criteria. Home use: Apply with a gentle massage by ascendant slipping until completely absorbed. Main active ingredients

Voluplus®	Stimulates adipogenesis and the creation of new fat cells that will give us results in an increase in breast volume. Contains Macelignan, a plant asset obtained from the seeds of nutmeg. This active ingredient is dissolved in macadamia oil to increase its penetration, offers better protection against oxidation and at the same time provides a soft skin.
Hyaluronic Acid	Biologically, one of the most important properties of hyaluronic acid is its ability to absorb water. This active is able to penetrate the skin by creating hydration reservations in the surface layers thereof. Furthermore, it encourages the opening of channels in the skin, fact by which other molecules with less penetration power, physically or chemically bound to hyaluronic acid, are also able to penetrate the skin.
Soybean Seed Oil	An extract rich in amino acids that helps to smooth. Contributes to the healing of tissues, stimulates the synthesis of collagen and elastin and increases tissue oxygenation.
Shiitake extract	It is known for being one of the most popular sources of protein in Japan. Description Breast firming mask

Reference

53021000

Main active ingredients

Calcium

Calcium participates in the cellular metabolism of the skin, is involved in the formation of collagen redensifying the tissues and remineralizing the skin.

Inhibits the formation of enzymes responsible of the degradation of elastic fibers.

Regulates the synthesis of potent antioxidants, such as catalase enzyme. As with age, the bioavailability of calcium decreases, the contribution of this mineral helps to combat premature ageing.

Slightly increases the temperature, by which facilitates the penetration of actives applied previously.
